

## Module 2:SE HTML CSS

8. In how many ways can a CSS be integrated as a web page?

➤ There are 3 ways of integrated CSS as a web page:

- **Inline CSS:**

- Styles added directly to the HTML element.
- Inline style is the approach of adding CSS rules directly to the HTML element using the `style` attribute.

For example:

- `Style-` defines the CSS for the element `<p>`
- `Color : red-` changes the text of the `<p>` element to the color red.

- **Internal CSS:**

- Styles defined at the `head` section of the document.
- Internal CSS applies CSS styles to a specific HTML document.
- Internal CSS is defined inside an HTML document using `<style>` attribute within the `head` tag of an HTML.

For example:

- `<style>`- defines CSS
- `<p>` – selects p tag and applies CSS to it
- `color: red;` - changes the text color of the content of `<p>` elements to red.

- **External CSS:**

- Styles defined in a separate file.
- External CSS is an approach to applying CSS styles to HTML pages by defining the CSS in a separate file.
